PROJECTS

Smart Spam Message Detection	GitHub
- Developed a Python-based NLP application to detect and classify messages as Spam or Safe using machine learning. - Processed and cleaned message data, followed by TF-IDF feature extraction to convert text into numerical data. - Trained a machine learning model to identify spam patterns from the processed message dataset. - Designed the system to accept user message input, process the text, analyze it through the trained model, and generate a Spam/Safe prediction. - Built and integrated a Tkinter GUI with the trained model for simple and real-time message detection.	
Technologies: Python, NLP, Machine Learning, Pandas, Scikit-learn, TF-IDF, Tkinter	

INTERNSHIP EXPERIENCE

Novitech R&D Private Limited	May 2026 – June 2026
<i>Data Analytics – Masterclass Online</i>	
- Successfully completed a 30-day Data Analyst Masterclass with practical exposure to data analytics concepts and tools. - Worked with Excel, SQL, Power BI, and Python for data cleaning, data analysis, and data visualization.	

CERTIFICATIONS

- 30 Days MasterClass in Data Analytics** – NoviTech R&D Private Limited, June 2026
